

ABSTRACT OF THE DISCLOSURE

The present invention discloses a transparent trophy structure, comprising: a base; a main body of a predetermined thickness disposed on the base and one surface of the main body being straight and flat, and the other surface being a inwardly concaved curved surface; and a figure object made by a special printing method and disposed on the curved surface, thereby when the transparent trophy structure is in use, the planar figure object shows a 3D appearance with the reflection of lights that enter into the curved surface at different angles.
